08	**Contact**	Let's talk	23

01 INTRODUCTION

I connect design, technology and creativity to turn *ideas* into *real* projects.

I'm a multidisciplinary professional. I like being involved in every stage of a project: from concept and planning to design, development and final production.

My profile combines creative thinking, visual sensitivity and technical understanding. It isn't about doing a little of everything; it's about understanding how the parts of a digital product fit together and helping build it end to end.

01

Integrate

I connect disciplines that usually work apart: strategy, design, development and content.

02

Understand

Before designing, I understand the problem, the context and the real constraints.

03

Build

I turn ideas into concrete products that are documented and verifiable.

04

Explore

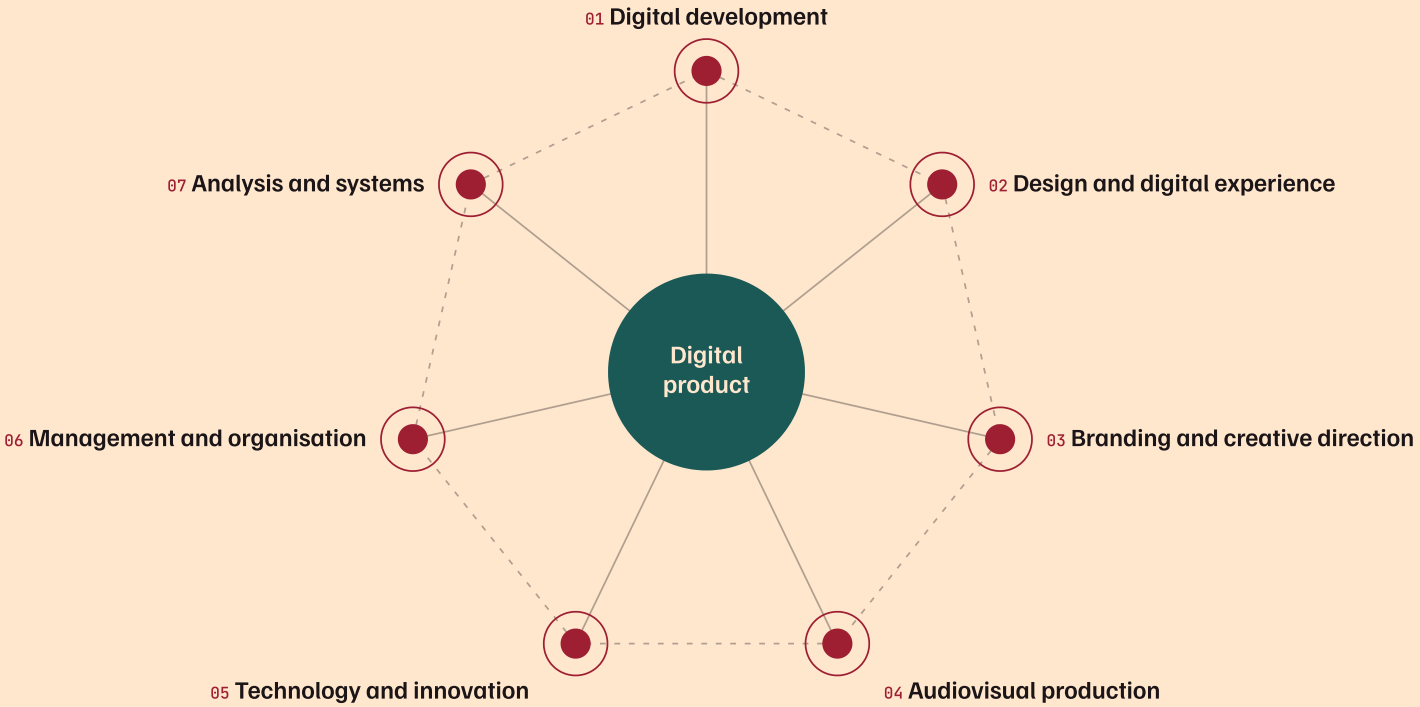

I test tools, visual languages and new ways of working —AI included — with judgement.

OPEN TO

Full-time roles · Freelance projects · Creative collaborations

02 CAPABILITIES

An ecosystem, *not a list.*

Each discipline brings a different lens to the same goal: building a digital product that works, communicates and can grow.

The value isn't in each area on its own but in the connections: an architecture decision changes an interface; a brand decision changes a flow; a new tool changes how things get made.

Seven areas that intersect in every project

Capabilities as I practise them. No levels or certifications are implied.

01

Digital development

- Websites and platforms
- E-commerce and digital products
- Digital product architecture
- Structures and features
- Technology build processes

02

Design and digital experience

- UI/UX and interface design
- Digital experiences and interactive products
- Graphic design and visual communication
- Information architecture
- Flows and journeys

03

Branding and creative direction

- Training in branding and visual identity
- Concepts and visual languages
- Graphic system exploration
- Visual communication

04

Audiovisual production

- Video editing
- Image editing and treatment
- Visual content experimentation
- Audiovisual production and exploration

05

Technology and innovation

- AI applied to creative processes
- Automation and digital tools
- Technology experimentation
- New design and development possibilities

06

Management and organisation

- Project and task planning
- Workflow coordination
- Documentation and communication
- Collaborative work

07

Analysis and systems

- Data analysis and visualisation
- System design and modelling
- Structures, relationships and behaviours

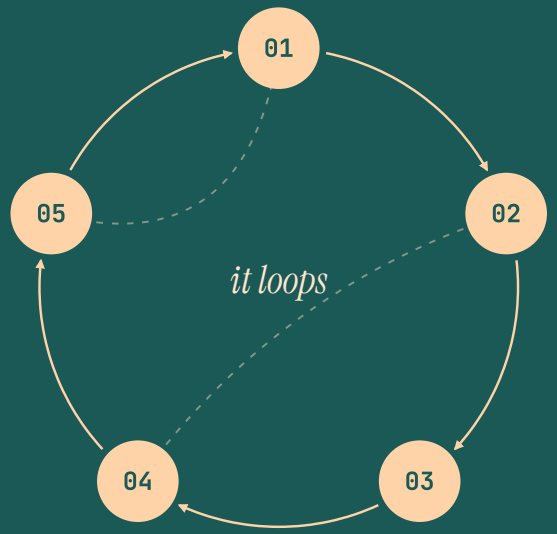

IN THE CASES

GXK12:2 and Proyecto Raíces show these areas working together, from strategy to code.

03 HOW I WORK

Five stages that *start over.*

It isn't a straight line. Experimenting can send a project back to design; evolving opens a new round of exploration. Each loop leaves the product clearer and sturdier.

01 **Explore**

Research, understand the problem, uncover opportunities and shape a concept.

02 **Design**

Define experiences, structures, systems and visual identities.

03 **Build**

Develop solutions and turn ideas into concrete products.

04 **Experiment**

Test technologies, tools, concepts and possibilities.

05 **Evolve**

Evaluate, learn, iterate and improve.

IN PRACTICE

Raíces — after the functional stage closed, the project went back to design: a "System Reset" reorganised the base into Foundation → Components → Patterns → Pages → Content without rebuilding what worked.

GXK12:2 — the cart's availability logic was designed, implemented, tested and sent back to Figma to align the interface with the decisions made.

04 CASE 01

GXK12:2

How a complete digital product gets built: from a brand with a strong identity to a store, a purchase journey and a management panel, with each discipline feeding the next.

G & K, the brand's host characters. Asset used on the implemented Home page.

TYPE

E-commerce ecosystem and digital experience

ROLE

End-to-end: strategy, UX/UI, identity, development and documentation

STATUS

In development · 2026

STACK

Next.js · TypeScript · Supabase

01 — OVERVIEW AND CONTEXT

GXK is a clothing brand with a wide catalogue, high turnover and small stock: around 2–3 units per variant. Today it sells mainly through Instagram.

Its essence fits in one line: “a space for exploration and transformation through clothing”. Slogan: **NO TE CONFORMES. TRANSFORMATE.** (“Don’t settle. Transform.”)

02 — GOAL AND OPPORTUNITY

Centralise operations in an owned store and give the team a private panel to manage catalogue, stock, photos and orders without technical knowledge.

The opportunity: a store that doesn’t feel like generic e-commerce, but like “the door to the GXK house”.

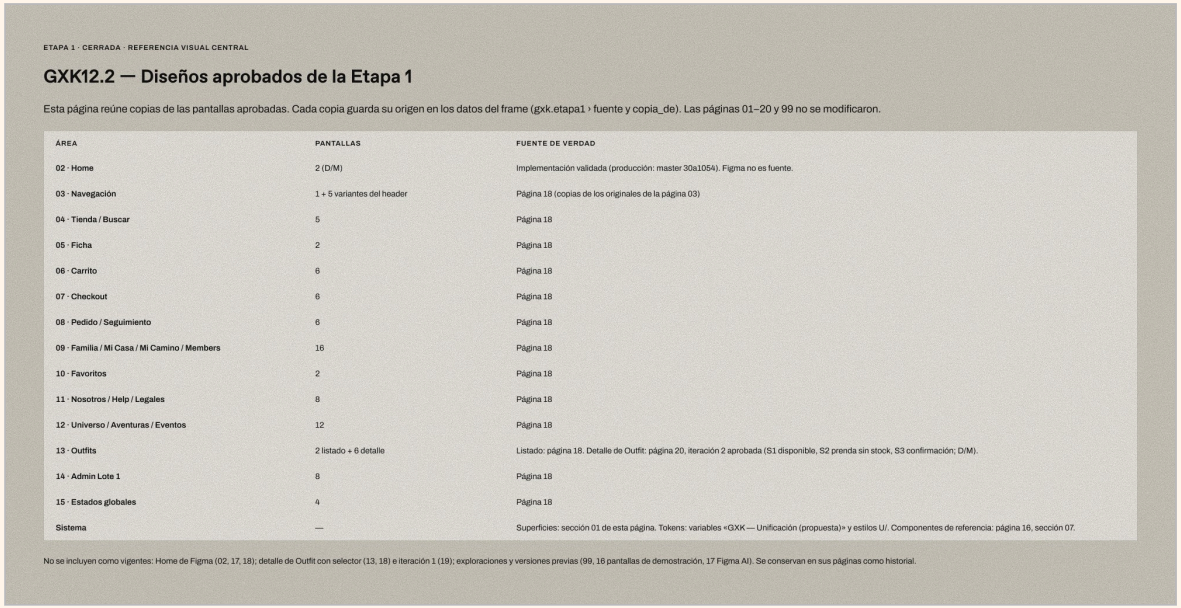

03 — MY ROLE

- Concept
- Product strategy and architecture
- Experience design
- Interface design
- Identity and visual direction
- Technical development
- Organisation and documentation
- Tool and process integration

HOW IT’S BUILT

I define product, scope, architecture and visual direction, and approve every design. Implementation is carried out with AI agents (Claude Code) on decisions that are already approved, in isolated branches, with tests and review before anything is merged.

Figma → approval → implementation → QA

ETAPA 1 · CERRADA · REFERENCIA VISUAL CENTRAL

GXK12.2 — Diseños aprobados de la Etapa 1

Esta página reúne copias de las pantallas aprobadas. Cada copia guarda su origen en los datos del frame (gxk.etapa1 › fuente y copia_de). Las páginas 01–20 y 99 no se modificaron.

ÁREA	PANTALLAS	FUENTE DE VERDAD
02 · Home	2 (D/M)	Implementación validada (producción: master 30a1054). Figma no es fuente.
03 · Navegación	1 + 5 variantes del header	Página 18 (copias de los originales de la página 03)
04 · Tienda / Buscar	5	Página 18
05 · Ficha	2	Página 18
06 · Carrito	6	Página 18
07 · Checkout	6	Página 18
08 · Pedido / Seguimiento	6	Página 18
09 · Familia / Mi Casa / Mi Camino / Members	16	Página 18
10 · Favoritos	2	Página 18
11 · Nosotros / Help / Legales	8	Página 18
12 · Universo / Aventuras / Eventos	12	Página 18
13 · Outfits	2 listado + 6 detalle	Listado: página 18. Detalle de Outfit: página 20, iteración 2 aprobada (S1 disponible, S2 prenda sin stock, S3 confirmación; D/M).
14 · Admin Lote 1	8	Página 18
15 · Estados globales	4	Página 18
Sistema	—	Superficies: sección 01 de esta página. Tokens: variables «GXK — Unificación (propuesta)» y estilos U/. Componentes de referencia: página 16, sección 07.

No se incluyen como vigentes: Home de Figma (02, 17, 18); detalle de Outfit con selector (13, 18) e iteración 1 (19); exploraciones y versiones previas (99, 16 pantallas de demostración, 17 Figma AI). Se conservan en sus páginas como historial.

10 — Visual material · Index of approved designs in Figma: 14 areas, from store to Admin, each with its source of truth. The Home uses the validated implementation as its source.

Sources: Brand & E-commerce Bible, Requirements and Methodology (Obsidian); GxK12-2 repository; Figma file.

04 — CONCEPT

From a brand with personality to a *system* that can be built.

First came the **Brand & E-commerce Bible**: essence, voice, product rules, stock, payments, delivery and returns. Then the **Visual Direction** translated that identity into rules. The hierarchy is explicit: the Bible defines what GXK is; the visual direction defines how it looks.

PERSONALITY IN TENSION

elegant + urban
minimal + exaggerated
serious + absurd

classic + experimental
premium + approachable

Common trait: curiosity.

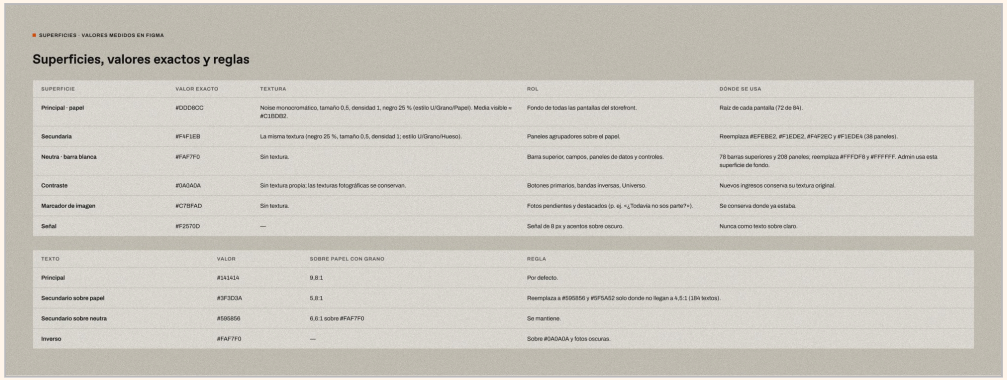

MASTER RULE

"GXK doesn't break rules for the sake of it. It decides when to stop following them."

05 — DESIGN PROCESS

01	02	03	04
Structure	**Tension**	**Rupture**	**Resolution**

Compositional cycle from V0.2. Decision hierarchy: **clarity → identity → exploration → visual effect**. If an effect hurts clarity, it goes.

SUPERFICIES · VALORES MEDIDOS EN FIGMA

Superficies, valores exactos y reglas

SUPERFICIE	VALOR EXACTO	TEXTURA	ROL	DÓNDE SE USA
Principal · papel	#ODD8CC	Noise monocromático, tamaño 0.5, densidad 1, negro 25 % (estilo UI/Grano/Papel). Media visible = #C1BD82.	Fondo de todas las pantallas del storefront.	Raíz de cada pantalla (72 de 84).
Secundaria	#F4F1EB	La misma textura (negro 25 %, tamaño 0.5, densidad 1; estilo UI/Grano/Hueso).	Paneles agrupadores sobre el papel.	Reemplaza #EFEBE2, #F1EDE2, #F4F2EC y #F1EDE4 (38 paneles).
Neutra · barra blanca	#FAF7F0	Sin textura.	Barra superior, campos, paneles de datos y controles.	78 barras superiores y 208 paneles; reemplaza #FFFDF8 y #FFFFFF. Admin usa esta superficie de fondo.
Contraste	#0A0A0A	Sin textura propia; las texturas fotográficas se conservan.	Botones primarios, bandas inversas, Universo.	Nuevos ingresos conserva su textura original.
Marcador de imagen	#C7BFAD	Sin textura.	Fotos pendientes y destacados (p. ej. «¿Todavía no sos parte?»).	Se conserva donde ya estaba.
Señal	#F2670D	—	Señal de 8 px y acentos sobre oscuro.	Nunca como texto sobre claro.

TEXTO	VALOR	SOBRE PAPEL CON GRANO	REGLA
Principal	#141414	9,8:1	Por defecto.
Secundario sobre papel	#3F3D3A	5,8:1	Reemplaza a #595856 y #5F5A52 solo donde no llegan a 4,5:1 (184 textos).
Secundario sobre neutra	#595856	6,6:1 sobre #FAF7F0	Se mantiene.
Inverso	#FAF7F0	—	Sobre #0A0A0A y fotos oscuras.

Surface system measured in Figma: exact values, grain texture and text contrast (9.8:1 for body text). Approved design.

SYSTEM BASE RULES

12 · 8 · 4
columns desktop · tablet · mobile

0 radius
no shadows, glass or blur

Orange = signal
never a structural colour

06 — UX/UI DECISIONS

“Find what you came for fast, so you have more time to discover what you didn’t know you wanted.”

I WANT TO BUY

find → choose → pay → done

I WANT TO EXPLORE

outfits → campaigns → stories → G/K → adventures → universe → family → events

Two speeds in one product: buying can’t lose clarity because of exploration, and exploration can’t feel like a catalogue.

Add-to-cart confirmation

A panel (bottom sheet on mobile) replaces “Added ✓”. It doesn’t auto-close or stack; focus, Escape and screen-reader announcement are specified.

Honest availability

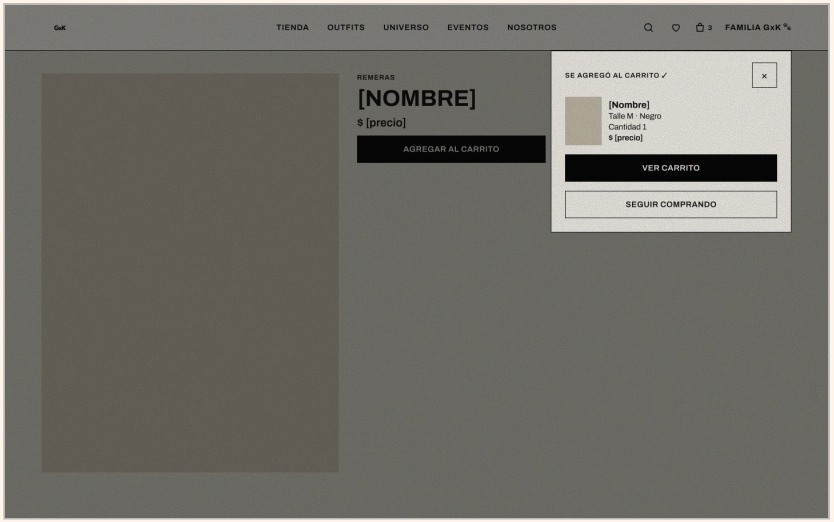

A failed check is not the same as “out of stock”. “Start checkout” stays locked while verifying, and “Retry” is offered.

Selectors, not chips

In the cart, size and colour are edited with dropdowns; chips were tested and dropped.

Visible business rule

The cart doesn’t hold stock: the first confirmed payment wins. The interface says so, calmly.

Add-to-cart confirmation · desktop. Approved design in Figma (Stage 1). Product images are placeholders.

DESIGNED PURCHASE JOURNEY

01	02	03	04	05	06	07	08
Store	Product	Confirmation	Cart	Details	Delivery	Payment	Order status

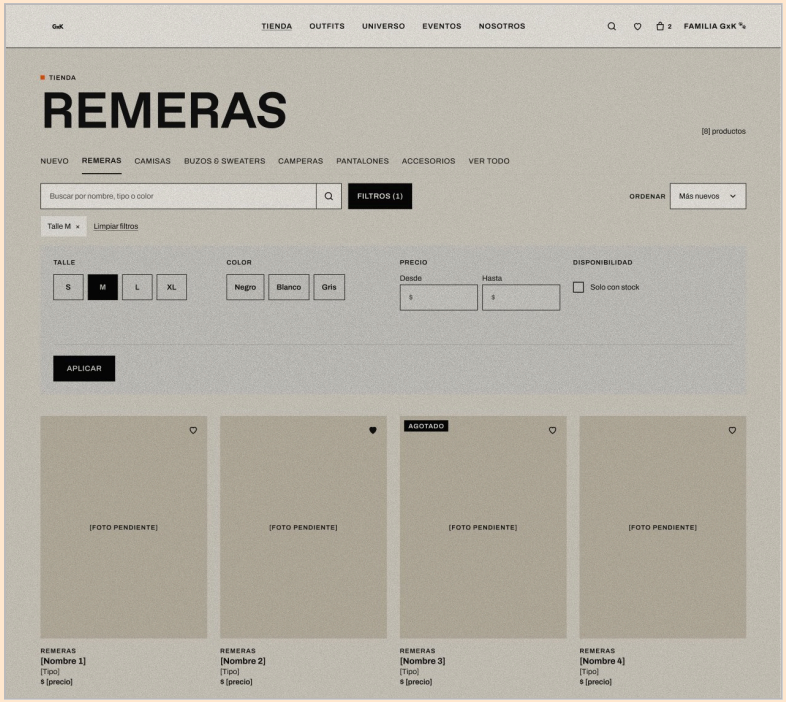

Each step has its states: empty, loading, error, out of stock and confirmation, on desktop and mobile.

07 — INTERFACE DESIGN

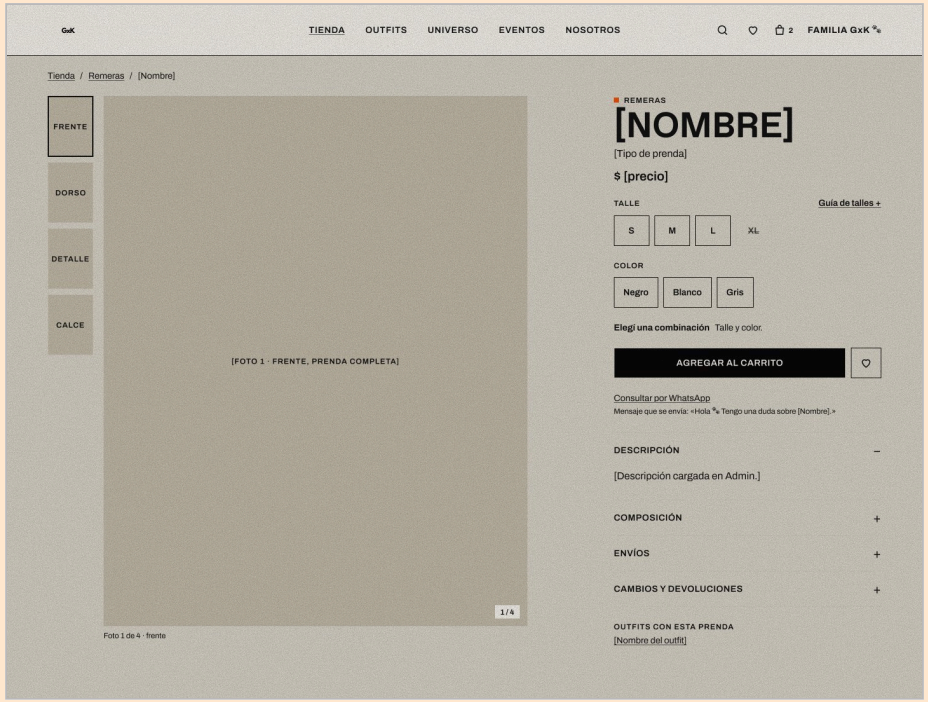

Store and product page: *type-led,* information without noise.

The product page follows the Bible: large photos, name, type, price, size, colour, size guide, composition, shipping, returns and a WhatsApp query with the product already filled in.

On mobile, the buy action stays pinned and says what's still missing. Photos are placeholders: the system is validated before the photo shoot.

Store · desktop · filters open

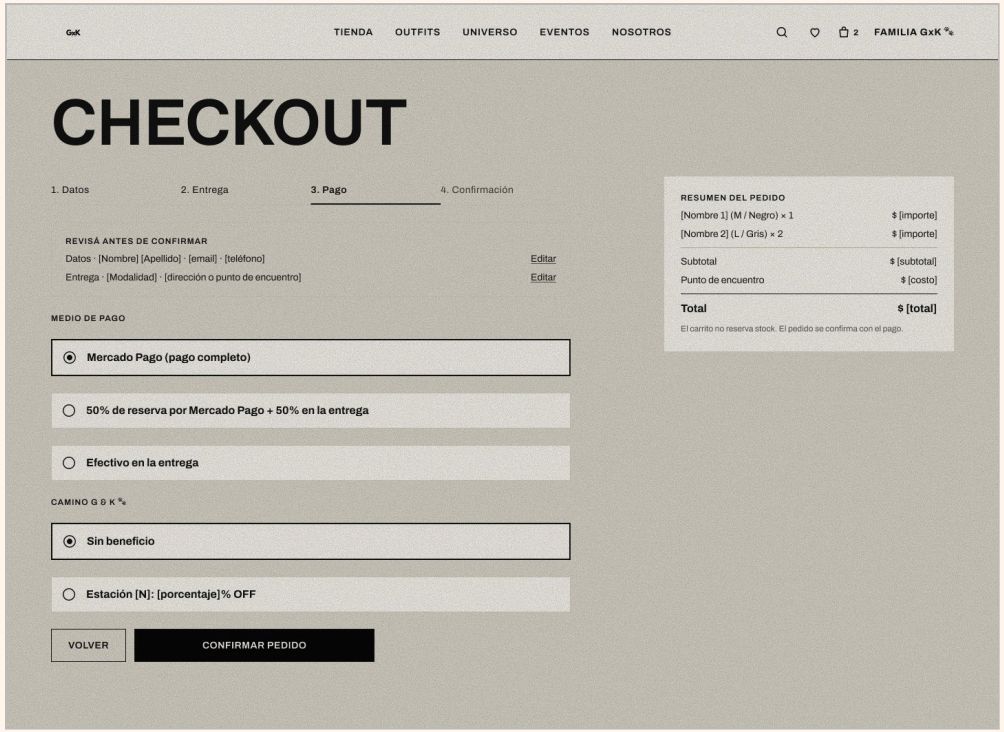

Product page · desktop

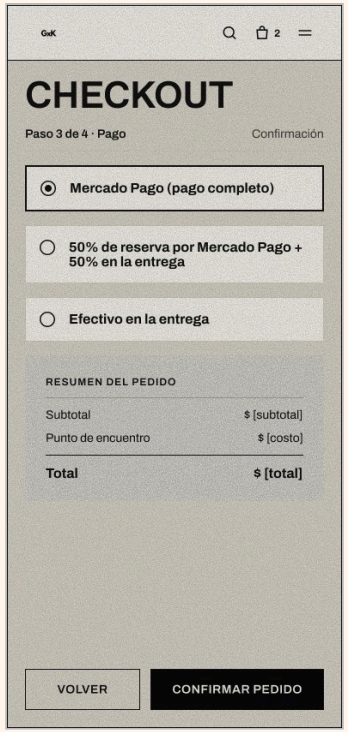

Product · mobile

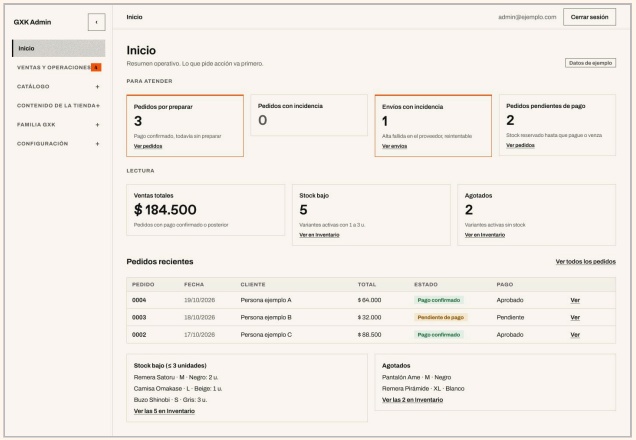

Approved Stage 1 designs · Figma.

Checkout · step 3, payment and review · desktop. Methods set by the Bible: Mercado Pago, 50/50 deposit and cash on delivery.

Checkout · mobile

Admin · Home. Figures are **sample data**, labelled as such in the design itself.

MANAGEMENT PANEL

“What needs action comes first.”

A single initial admin with no technical background: orders to prepare, incidents and low stock (≤ 3 units) on top; the general overview after. A principle shared with Raíces: *lots of logic behind, little friction in front.*

08 — ARCHITECTURE

Three surfaces on one backend and one set of business logic. Verified in the repository (README, ARCHITECTURE.md and src/ structure).

09 — TECHNICAL DECISIONS

Stock per variant	Product + size + colour with a uniqueness constraint. The product holds no total stock.
Orders as snapshots	Each item stores name, variant, SKU and price at the moment of purchase.
Tracking without an account	Order access via an unpredictable token; only its hash is stored.
Server-confirmed payment	Status depends on Mercado Pago's webhook, not on the browser redirect.
Decoupled providers	Andreani and Correo Argentino sit behind adapters: they can be added or swapped without touching the core.

10 — TOOLS CONFIRMED IN THE PROJECT

Figma · Claude Design · Claude Code · GitHub · Linear · Obsidian · Supabase · Vercel (Preview)

Quality: unit tests, TypeScript, ESLint and browser tests as a gate before merging.

11 — CURRENT STATUS · NOVEMBER 2026

What's approved, what's built *and what's left.*

● APPROVED	Design · Stage 1	Approved designs consolidated in Figma: 14 areas on desktop and mobile, from store to Admin, including error and loading states.
● IMPLEMENTED	Home	On the repository's main branch; the implementation is the Home's source of truth.
● ON BRANCH	Purchase and content	Checkout, order status, content and account pages, and cart availability logic: implemented on working branches, not yet merged or published.
○ PENDING	Live integrations	Mercado Pago and shipping in production; the Andreani and Correo Argentino adapters don't make live calls yet. Email provider to be defined.
○ NEXT	Beta	Full QA and a presentation beta for GXK's owner (target: 30 Nov 2026); then a commercial beta and launch.

12 — CONCLUSIONS AND LEARNINGS

Design before implementing.
An AI agent works best as an implementer once the visual direction is decided.

A simulation isn't an integration.
What's tested against mocked data is reported as such, never as a finished feature.

Approved ≠ implemented ≠ published.
Keeping these states apart avoids confusing progress with delivery.

No commercial metrics: the product hasn't launched yet.

Public site home — screenshot of proyectoraices.com.ar

05 CASE 02

Proyecto *Raíces*

"Journeys to connect with every place." The evolution of a digital platform: from a working site to a system ready to grow. proyectoraices.com.ar

TYPE

Digital platform for adventure travel

ROLE

Strategy, architecture, UX/UI, design, development and documentation

STATUS

Public site live · Admin in development

STACK

HTML · CSS · JavaScript · Supabase

01 — OVERVIEW AND CONTEXT

Proyecto Raíces offers tours, treks and packages in Argentina and Peru that combine nature, adventure, culture and encounters, far from the traditional agency model.

02 — GOAL AND OPPORTUNITY

A website that feels like a proposal of experiences rather than a generic agency: photography and storytelling working together, clear navigation and a simple path to ask and book.

It was also the project where I validated my working method.

03 — MY ROLE

- Product strategy
- Concept
- Architecture
- User experience
- Design
- Development
- Organisation and documentation

07 — INFORMATION ARCHITECTURE

Two doors, one catalogue. *The split is deliberate.*

Experiences — CATALOGUE

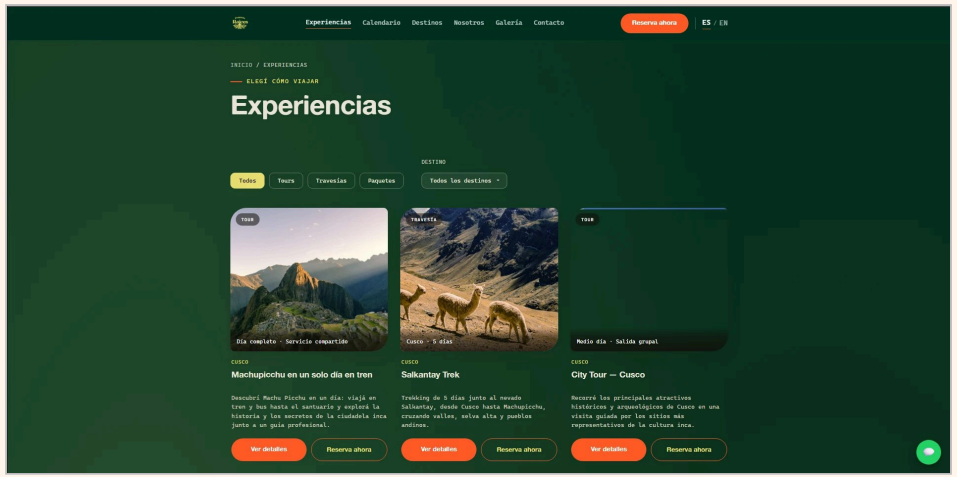

- All experiences
  - Tours · Treks · Packages
    - Filter by destination
      - Experience page

Destinations — EDITORIAL

- Country
  - Specific destination
    - Story and place information
      - Related experiences

No duplication. Destinations is an editorial door into the catalogue, not a second catalogue. Patagonia works as geographic context, not as a navigable destination.

One template, many destinations. A single destination page reused through a URL parameter, fed by the same data source as the catalogue.

Implemented Experiences catalogue: filters by type and destination. Public site, desktop.

04 — CONCEPT · 05 — DESIGN PROCESS

“The site shouldn’t look like a travel website. *It should look like Raíces.*”

A **visual DNA** was distilled from a reference library: colour, type, photography, composition, navigation, graphic resources and motion. It isn’t a page: it’s a set of rules for building a Raíces of its own.

CURRENT IDENTITY

Blue	Brown	Orange	Yellow	Green	Olive
#8ba6b7	#8d4b12	#ff5b28	#e9e073	#43612f	#6a7133

Alte Haas Grotesk · Cascadia Mono · Arial Rounded

SIX DIRECTIONS EXPLORED FOR THE HOME

Territorio monumental · Cartografía viva · Atlas humano · Secuencia de expedición · Periódico de montaña · Señal abierta

● EXPLORATIONS · NOT APPROVED

Raíces / Visual DNA — Figma board.

“Mountain newspaper” direction — Figma exploration, not implemented. Mock copy and dates are placeholders.

06 — UX/UI DECISIONS

A clear, editorial travel experience, *not a spec sheet.*

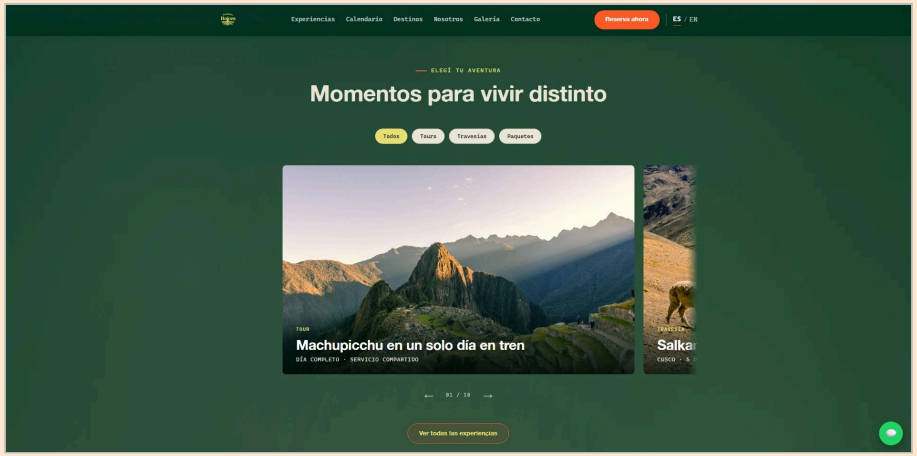

Experience page contract
Details = what you need to decide. Itinerary = what helps you imagine the trip. Fields without real data are hidden, never filled by inference.

Card system
A shared image container with a constant ratio. Inconsistencies are fixed in the system, not photo by photo.

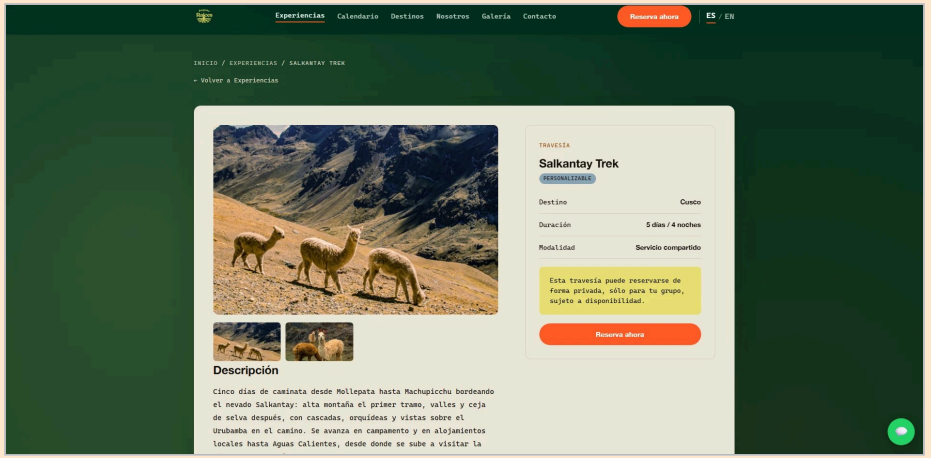

Photography leads
Real landscapes and people; no overlays hiding the image or crops that lose the focal point.

One path to enquiry
Main CTA “Book now”; enquiries go to WhatsApp with the experience already named. It isn’t an e-commerce site.

● IMPLEMENTED · PUBLIC SITE

Home · “Moments to live differently”: experience carousel filtered by type.

Experience page · Salkantay Trek: essential details, private-option note and a single CTA.

“Lots of logic behind, little friction in front.”

Interface principle shared with GXK12:2: the model’s complexity is solved on the inside.

Screenshots of the public site proyectoraices.com.ar (desktop), provided by Ignacio.

08 — TECHNICAL DEVELOPMENT AND EVOLUTION

HTML, CSS and framework-free JavaScript · Supabase · ES/EN i18n · Playwright. A single layer (`data-api.js`) knows the database; the rest of the site doesn't.

Sep 2026	**Data moves to Supabase**	Content leaves flat JS files for a database with a single access layer.
Sep 2026	**Bilingual and QA**	ES/EN copy and end-to-end tests with Playwright.
28.09	**Functional stage closed**	With a stable base, focus shifts to UX/UI and visual direction.
05.10	**System Reset**	Foundation → Components → Patterns → Pages → Content. Migrate progressively; don't rebuild.
Oct 2026	**Admin / CMS**	Admin → content model → Supabase → DataAPI → pages. The Admin manages entities, not presentation.
26.10	**Strategic review**	Packages as the commercial priority and local guides as a new axis. Recorded; new architecture not yet approved.

11 — CURRENT STATUS · NOVEMBER 2026

● LIVE

Public site

● IN DEVELOPMENT

Content Admin / CMS, under verification

○ PAUSED

New migrations, until a restorable database backup is confirmed

○ TO APPROVE

Restructure: packages and local guides

12 — LEARNINGS

- Model and system first; Admin second.
- Preserve what works and migrate layer by layer.
- With real data, backups come first.

Sources: project documentation (Obsidian), proyecto-raices repository and Figma file. Confirmed tools: Figma, Claude Design, Claude Code, GitHub, Linear, Supabase, Playwright, Cloudflare.

06 CREATIVE LAB

Curiosity *with a method.*

Experimentation doesn't live apart: it shows up inside the projects —six directions for one Home, a visual-rules lab, interaction prototypes— and in the way I work.

Explorations documented in the cases: Raíces (Visual DNA and Home directions) and GXK12:2 (Visual Rules Lab V0.2, motion prototypes in Figma).

ONGOING EXPERIMENT · MACARIO

My own system for building digital products with AI.

It organises the cycle idea → research → product → visual → UX/UI → architecture → development → QA → release → iteration, and defines what a person decides and what an agent executes. Agent autonomy covers *how* to execute what's approved, never *what* gets built; merging, publishing or touching real data needs explicit authorisation.

Obsidian	knowledge
Linear	work
Figma	visual source
GitHub	code
Claude Design	exploration
Claude Code	execution

UPCOMING EXPLORATIONS

This space is ready to hold new work as it happens. It contains no pieces yet.

RESERVED SPACE

3D exploration

RESERVED SPACE

Audiovisual exploration

RESERVED SPACE
